

A scatter plot showing client RTT estimates in milliseconds. The x-axis is labeled 'client RTT estimates [ms]' and ranges from 0 to 225 with major ticks every 25 units. The y-axis is unlabeled but has a grid corresponding to the x-axis. The data points are blue dots. There is a very dense cluster of points near the origin (0, 0), with a few points extending up to approximately 40 on the y-axis. There are also several outliers at higher x-values: one near (85, 15), one near (140, 140), one near (145, 140), and one near (225, 225).
