

A scatter plot showing client RTT estimates in milliseconds. The x-axis is labeled 'client RTT estimates [ms]' and ranges from 0 to 225 with major ticks every 25 units. The y-axis is unlabeled but has a grid corresponding to the x-axis. The data points are blue dots. There is a very dense cluster of points in the bottom-left corner, mostly below 25 ms on the x-axis and below 25 on the y-axis. A few points are scattered at higher values, including one near (140, 140) and another near (225, 225).
